**Involvement in research programmes:**

- **EURANDOM ( $\geq 1998$ ):**

EURANDOM (<http://www.eurandom.tue.nl/>) is a European institute for research in probability, statistics and stochastic operations research. In the period 1998–2010 it had a junior staff of 25 postdocs and graduate students, a senior staff of 15 researchers in part-time advisory appointments, a small managing staff, and an extensive workshop and visitor programme. During that period it hosted a total of 150 junior researchers. After 2010, EURANDOM gradually evolved into a workshop and visitor center.

In the period 2000–2005 I was scientific director of EURANDOM. In that capacity I was able to help young researchers advance their career, to stimulate the development of Dutch stochastics via national collaboration and international exchange, to take strategic initiatives to strengthen collaboration within Europe, and to secure 5M Euro core funding for EURANDOM for the period 2003–2007, from NWO and Eindhoven University of Technology.

- **ERC-project VARIS (2011 – 2016):**

VARIS focussed on systems consisting of a large number of random components that interact locally but exhibit a global dependence, resulting in phase transitions and associated critical behaviour. Typically, the components of these systems are subject to a simple and well understood microscopic dynamics. The challenge lies in understanding the complex macroscopic phenomena that may arise from this dynamics.

The project combined large deviation theory and variational calculus with space-time coarse-graining and scaling techniques. It focussed on five classes of highly complex random interacting systems: (1) polymer chains; (2) porous domains; (3) flipping magnetic spins; (4) lattice gases; (5) evolving random media. A total of 4 PhD-students, 4 postdocs and 6 visiting professors (half year) were appointed through the grant.

- **NETWORKS (2014 – 2023):**

NETWORKS is a consortium of 11 researchers from 4 institutions: University of Amsterdam, Center for Mathematics and Computer Science in Amsterdam, Eindhoven University of Technology, Leiden University. The aim of NETWORKS is to address the pressing challenges posed by large-scale networks. The focus is on modeling, understanding, controlling and optimizing networks that are complex and highly volatile.

The project is funded by the Ministry of Education, Culture and Science and administered by NWO. It brings together researchers from stochastics and algorithmics, and runs for a period of 10 years. At any time, it supports 20 PhD-students, 7 postdocs and 7 assistant professors. It further maintains an extensive workshop and visitor programme, develops a teaching and training programme, organises outreach activities, and builds up an interactive webpage (called “thenetworkpages”).
